FEASIBILITY SERVICES

One of the most beneficial services that White Mountain Survey & Engineering, Inc. provides, involves determining the feasibility of a particular use for a particular parcel of property. In other words, we help determine if the intended use by the person who owns the property, or the party who wishes to purchase property and has a particular use in mind, can in fact be done.

Often we find that someone wants to purchase a piece of property for a specific use and once they close on the property they learn that there is inadequate area for the sewage capacity they need, or there is a wetland that they had not anticipated. Some issues foil their intended use.

The service we can provide is to assess the property for the proposed use, and issue a report of our findings, which allows the buyer or seller to maximize the use of the property and to be certain that it is suitable for the intended use.
